- Command Code Generation

1. Label Building Tool Bar

2. Label Design Area

3. Database Feature

4. Multilingual

5. Sequential Number Feature

6. Command Code Generation

# What is QLabel

QLabel is a label printing software application written by Godex that is provided free with all Godex printers. It is fully featured to provide screen WYSIWYG representation of graphics, barcodes, internal/TTF fonts and other objects as they will appear on the printed labels. The software not only allows you to build and save label design templates, it is a complete software Utility for managing your printer.

QLabel can also be used as a platform for creating standalone printing applications or as a resource for generating EZPL code (Godex native command language) for use on non-windows applications or devices.

## System Requirements

- Printers: All current models
- Windows 98/NT/ME/2003/XP/VISTA
- 16MB RAM
- 50MB of hard disk space
- Internet Explorer v5.0 or upgraded
- 1 available local port from Com, Parallel and USB

## Benefits

- Free Software
- Support printer's accessories or connection devices (depends on printer).
- No software/hardware keys needed, does not expire
- It can be run with or without the Windows driver
- Database Viewer is included
- Command Viewer is included
- Internal font support
- TrueType Font download and printing
- Graphics download and printing
- Create standalone formats
