

## Segments of Industry in which Quicklabel printers are most frequently used

### Agricultural Chemical Labels

Print Pesticide Labels and Fertilizer Labels In-House with a QuickLabel Printer

Companies that formulate and package agricultural chemicals such as pesticides and fertilizers have cut label costs, saved time, reduced labeling errors, controlled label compliance, and sold private label products by printing their own product labels in-house.

#### **Print Pesticide Labels and Fertilizer Labels in Full-Color**

Full-color product photos, illustrations, logos and graphics can be printed directly from digital files, along with ingredients, barcodes, and hazard warnings.

#### **Make Fertilizer Labels and Pesticide Labels in Short-Runs**

Instead of keeping thousands of printed labels in inventory, manufacturers can print small quantities of product labels according to sales demand, so products can be labelled and despatched without delay. When product sizes or formulations change, it is quick and easy to edit or change digital label files and print new labels as needed.

#### **Private Labels**

Manufacturers can sell their products to dealers with their own logo and branding. Contract packaging is a good method for producers to make more money.

#### **Comply with GHS Labeling Requirements and EPA Pesticide Labeling Standards**

Pesticides and other chemicals must be labeled according to GHS labeling requirements and pesticides must comply EPA pesticide labeling laws. With an in-house label printer manufacturers can easily comply with periodic label regulation changes.
